

Experiment 13

Submitted by: Tushar Kanti Dhar (BU21CSCI0100121)

Bar Charts

First we open Tableau and connect to data source and load sample data. To demonstrate a Bar Chart, we drag a dimension to the "Columns" shelf and a measure to the "Rows" shelf. We'll see a horizontal or vertical bar chart depending on your choice of dimensions and measures.

Line Charts

To demonstrate a Line Chart we drag a dimension to the "Columns" shelf and a measure to the "Rows" shelf. Then we right-click on the measure pill on the "Rows" shelf and choose "Show Me" > "Lines." We'll see a line chart showing trends over time or other ordered dimensions.
