

Roll No: BU21CSCI0100121

Subject: Data Visualization Using Tableau Lab

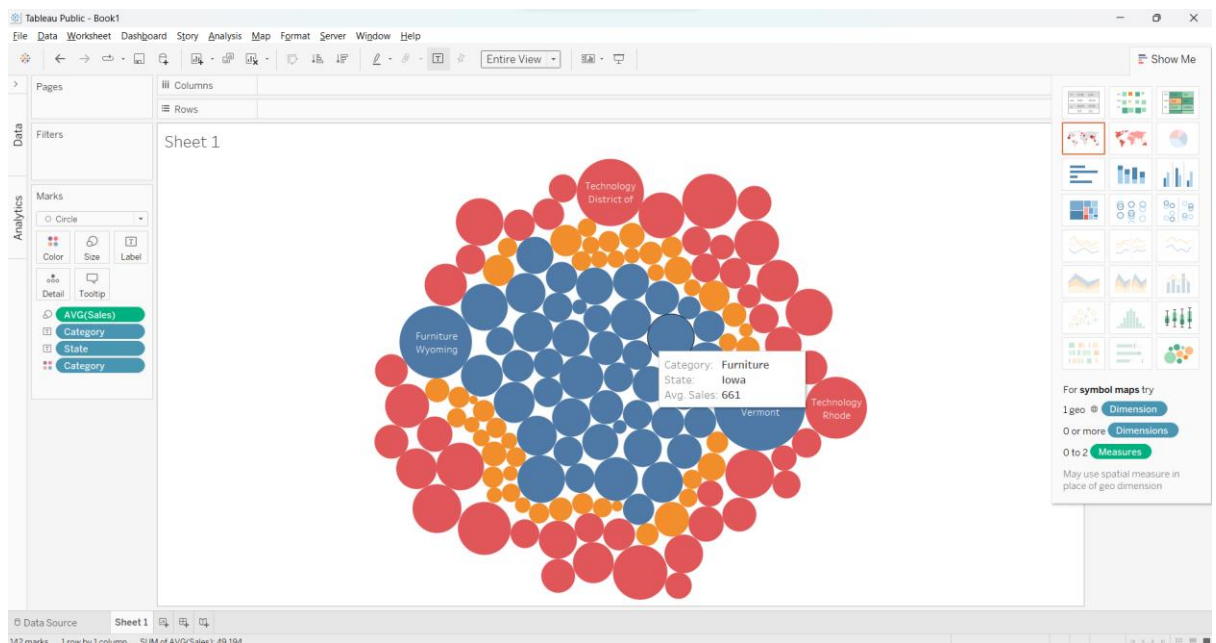

Experiment: 14

AIM:

To Demonstrate the Bubble Chart, Bullet Graph, Box Plot, Tree Map, Bump Char, Gantt Chart.

1. Bubble Chart:

- Creating the Bubble chart.
- Selecting the Fields from the data set and drag attribute 'Category' to the columns bar and similarly drag another attribute 'Sales' to the rows bar
- Then, It gives a some of the suggestion to display the data at right side of the screen.

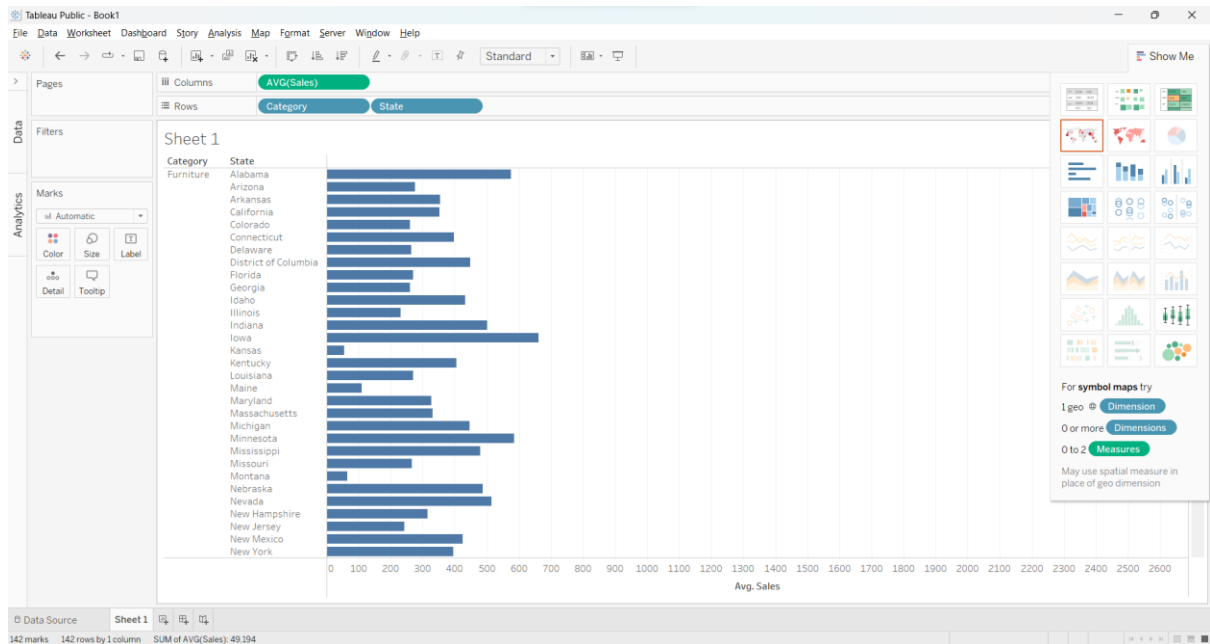

2. Bullet Chart:

- Creating the Bullet chart.
- Selecting the Fields from the data set and drag attribute 'Category' to the columns bar and similarly drag another attribute 'Sales' to the rows bar

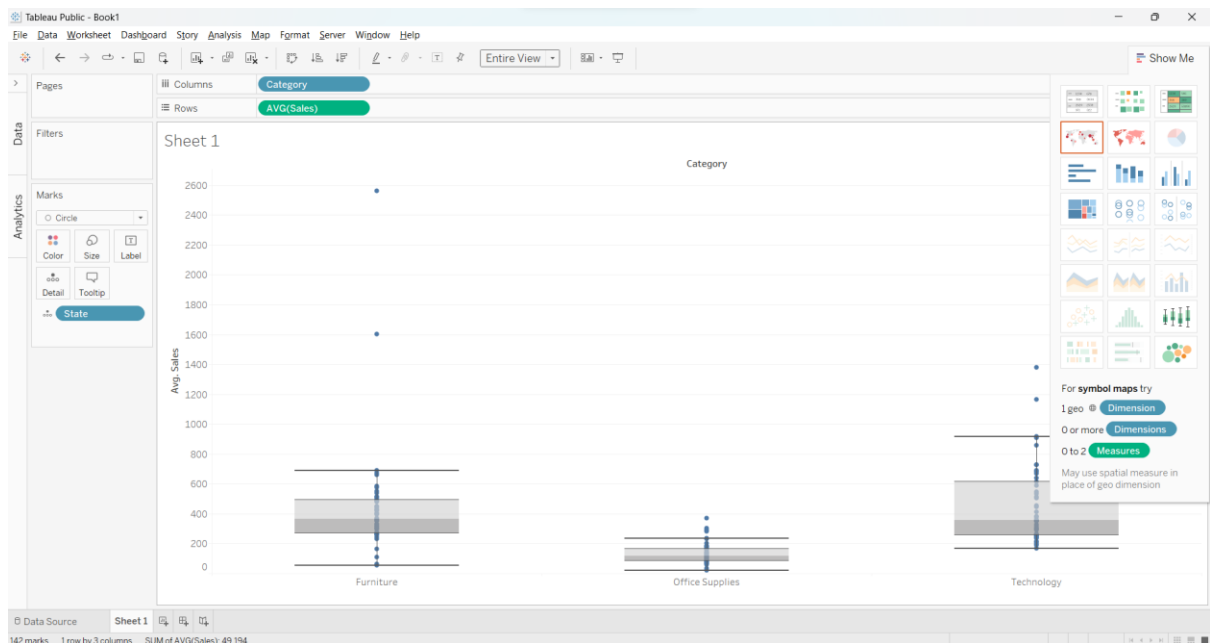

the rows bar

- Then, it gives a some of the suggestion to display the data at right side of the screen.

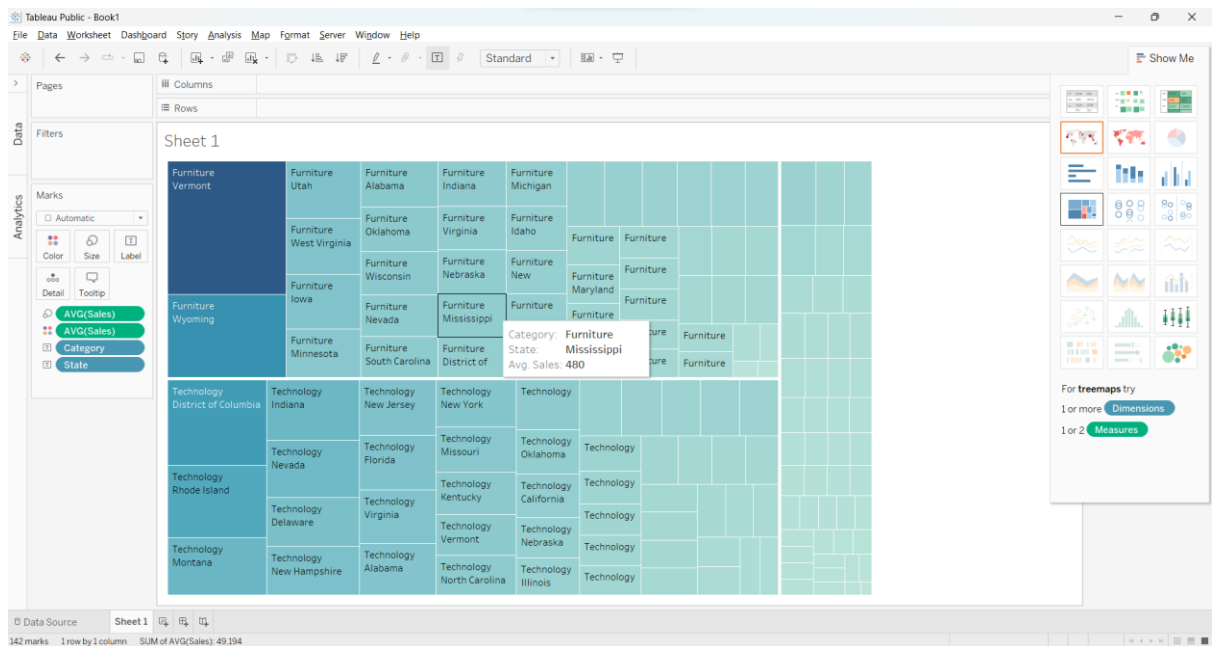

3.Box Plot:

- Creating the Box Plot.
- Selecting the Felds from the data set and drag attribute 'Category' to the columns bar and similarly drag anther attribute' Sales' to the rows bar
- Then, it gives a some of the suggestion to display the data at right side of the screen.

4.Tree Map:

- Creating the Tree Map.
- Selecting the Fields from the data set and drag attribute 'Category' to the columns bar and similarly drag another attribute 'Sales' to the rows bar
- Then, it gives a some of the suggestion to display the data at right side of the screen.

5.Bump chart:

- Creating the Bump chart.
- Selecting the Fields from the data set and drag attribute 'Order Id' to the columns bar and similarly drag another attribute 'Sales' to the rows bar
- Then, it gives a some of the suggestion to display the data at right side of the screen.

6.Gantt Chart:

- Creating the Gantt chart.
- Selecting the Felds from the data set and drag attribute 'Order Date' to the columns bar and similarly drag another attribute 'Sales' and 'Ship Mode' to the rows bar
- Then, it gives a some of the suggestion to display the data at right side of the screen.
