

- **Exp5: Program to Demonstrate the Add Worksheets, Rename Worksheet, Save & Delete Worksheet, Reorder Worksheet, Paged Workbook**

1) **Add Worksheets:** To add worksheets, simply click the "+ New Worksheet" tab at the bottom of the workbook. This will create a new blank worksheet where you can build visualizations.

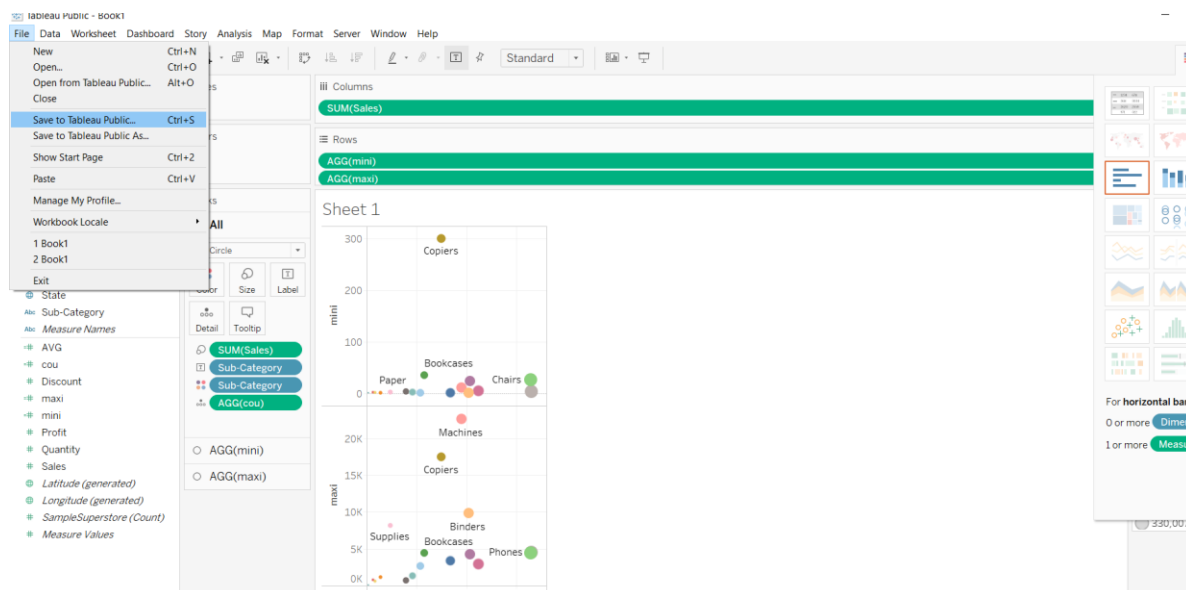

2) **Rename Worksheet:** To rename a worksheet, right-click on the tab of the worksheet you want to rename and select "Rename." Enter the desired name in the prompt that appears.

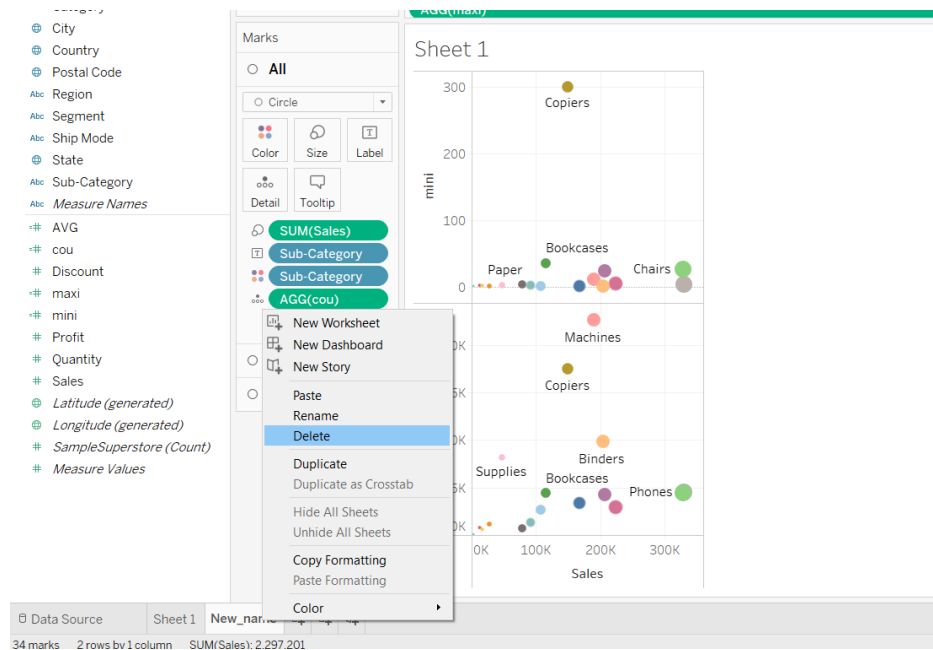

3) **Save & Delete Worksheet:** Saving and deleting worksheets are actions managed within the Tableau interface:

- **Save:** Tableau automatically saves your changes as you work. However, to explicitly save, you can use the "File" menu and select "Save" or "Save As."

- **Delete:** Right-click on the worksheet tab and select "Delete" to remove the worksheet. Be cautious as this action cannot be undone:

- **Reorder Worksheet:** To reorder worksheets, simply drag and drop the worksheet tabs along the bottom of the workbook interface to rearrange their order.
- **Paged Workbook:** Creating a paged workbook (with multiple pages containing different visualizations) is not done through programming, but rather through Tableau's user interface:

**Page Shelf:** You can add a field to the "Pages" shelf, which creates multiple pages in the workbook, each displaying different data based on the field's values.
